# Optimize, Govern and Secure Multi-Cloud Environments

## A single solution for multi-cloud management and security

- More than $20 billion in cloud spend under management

- More than 150,000 governance policies enabled

- More than 29 million security violations detected

- Risk detection speed of less than 6 seconds

## Scale intelligent business decisions

Organizations are increasingly adopting multiple clouds to gain agility, flexibility and control. However, loss of control, staying ahead of security risks, and climbing cloud bills become key challenges as cloud usage grows. Without a defined approach for managing multiple cloud providers or easy access to information, organizations are unable to predict cloud spend, eliminate resource waste, prevent security breaches, or avoid gaps in regulatory compliance.

As a result, leading organizations are establishing a formalized cloud center of excellence (CCoE). The CCoE is a cross-functional working group that governs the usage of the cloud across an organization and drives best practices across three areas of excellence: cloud financial management, operations, and security and compliance. Thousands of organizations around the world depend on the CloudHealth® by VMware Suite™ to support their current and future business goals. The suite gives you the ability to optimize, govern and secure the largest and most complex multi-cloud environments.

## A best of breed multi-cloud solution

CloudHealth by VMware delivers intelligent insights that help you optimize costs, improve governance, and strengthen your cloud security posture. With the solution, you can customize visibility for proper governance and build automated policies that help application owners avoid cost overruns, compliance gaps, and security vulnerabilities. This enables your organization to better manage business risk.

"CloudHealth discovers all different configurations, then CloudHealth Secure State tells us the risk factors in the event of any changes. It's almost like we're self-healing our cloud space in real-time."

Johan Marais, Senior Platform Services Manager, Discovery Holdings

## CloudHealth by VMware Suite

### CloudHealth

CloudHealth is a robust multi-cloud management platform that helps your organization simplify financial management, streamline operations, and improve cross-organizational collaboration through consolidated visibility and reporting across your entire cloud environment:

• Move faster in your cloud migration process

• Align business context to cloud data

• Optimize resource cost and utilization

• Centralize cloud governance

### CloudHealth Secure State

CloudHealth Secure State™ is an intelligent multi-cloud security and compliance monitoring platform that helps your organization reduce risk and protect millions of cloud resources by remediating security violations and scaling best practices at cloud speed.

• Improve security posture based on best practices

• Ensure continuous compliance with industry standards

• Prioritize threats and run security investigations

• Integrate security proactively in continuous integration and continuous delivery (CI/CD) processes
